

Introduction to GIS

Lab 01 – Thematic maps

Psd@du.se

Background:

Maps, both topographical and thematic, are a common end result of visualization and analysis of data in Geographic Information Systems (GIS). It is important to have knowledge of the basic types of thematic maps, as well as what the basic cartographic rules are when creating thematic maps.

Purpose:

The purpose of this assignment is to learn how to create two types of thematic maps: choropleth maps and proportional symbol maps.

Submit:

You need to submit the following maps as a PDF.

Task 1) Choropleth map showing average age in Swedish kommuns in 2020 (Use Join function).

Task 2) Symbol map with proportional symbols that show population size of kommuns for the year 2020 (Use Join function).

Task 3) Choropleth map of population changes in Swedish municipalities in the period P2015 – P2011.

Task 4) Create a dot density map showing the Swedish municipality. Dot density maps are a type of thematic map that use dots to represent the quantity or density of a variable. You can use the "Random points inside polygons" tool in QGIS to create this map.

Assignment 1 needs to be submitted no later than **04/05 23.59** in the submission folder on Learn.

Material: All material for the tasks can be found in Data-1.zip in Canvas.

Grade:

This assignment is graded as U/G.

G will be given if the four tasks are completed successfully.

Note: In this task you need to work individually.

All Map should have a title, legend, north arrow, and scale bar
